

Enhance New Approaches in BioBased Local Innovation Networks for Growth

PRESS RELEASE

August 2020

***Best Practices Atlas* expands the bioeconomy universe!**

Enabling Project hosts a **portfolio of four platforms** and services on its website; One of the platforms is the Best Practices Atlas.

An Atlas for the BBP industry

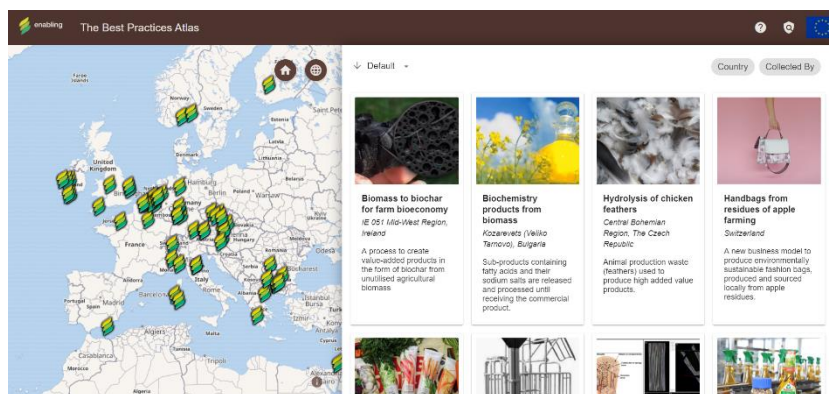

Transferring knowledge and information from different businesses and projects on biomass and sustainability is project's core mission. Enabling has collected information and companies that can be source of knowledge and inspiration for potential stakeholders in the bioeconomy. To better illustrate the information collected, a virtual interactive map has been created showing best practices identified from all over Europe and beyond.

The Best Practices Atlas is intended for presentation collected best BBP (Bio based Products and Processes) practices, that are wholly or partly transferable to other regions, or serve as an inspiration for partners in the value chain.

Each Best Practice hosted in the platform, presents the bio-based product and innovation, followed by information for the Biomass source, project's or business brief intro, the Business Model of the practice, Phase of the Innovation, and Benefit/ added value for several actors.

The user can easily navigate to the practices pool and narrow down the practices by selecting 'Country' options or 'Collected by', searching for customised results.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 774578.

Atlas is hosting over 100 practices at this moment and keeps growing. At this moment, the platform hosts practices not only from European countries, but also from Israel and Canada.

[Visit Best Practices Atlas by clicking here.](#)

Extra Fact!

The word Atlas /'æt.ləs/ roots back to Greek mythology. Nowadays, it is used to describe a book containing maps showing where particular things are made, found, etc e.g. an atlas of British plants.

About the project

ENABLING project is a 3-year Horizon programme that intends to develop the great potential of the bio-based industry, encouraging the creation of efficient and structured biomass supply chains to produce bio-based products (BBP). To do so, ENABLING proposes tools and methodologies nurturing collaboration and knowledge transfer among actors in the agricultural and innovation sectors.

Project title: ENHANCE NEW APPROACHES IN BIOBASED LOCAL INNOVATION NETWORKS FOR GROWTH | **Project ID:** 774578

Start Date: 01/12/2017 | **Project Duration:** 36 months
